

AUGUST 7, 2026

Human Oversight That Scales

Review should rise with consequence and irreversibility.

THE WORKING METHOD

Low risk For reversible, low-consequence work, sample outputs and monitor patterns.
Moderate risk Require a named reviewer and a visible quality checklist.
High risk Require evidence, explicit approval, and a documented escalation path.

WORKSHEET

Workflow	
Consequence of error	
Reversibility	
Required evidence	
Reviewer	
Approval record	

WHAT TO TEST NEXT

- 1. Map one workflow by risk.
- 2. Name the reviewer before the next run.
- 3. Advance automation only after controls survive repeated use.

Ideas may leave the room. Attribution may not. This guide excludes member names, personal disclosures, confidential business details, and unlaunched plans.
